

Three Moves on the Board

Where the company sits, what's actually available, and how the research gets operationalized without disturbing what's working.

#50
US RANK

1915 South is winning. Record 2025 sales + profit, disciplined M&A cadence (Fineman 2022, Yulee 2025), and a new President executing. The question isn't rescue. It's sequencing — which of three available moves gets made next, on what timeline, with what outside support, and with what ownership of the operating layer.

CAPITAL ALLOCATION VIEW

- **Free cash flow (est):** \$15–18M/yr after debt service and capex — a real capital-allocation decision every year
- **Acquisition muscle proven:** Fineman 2022 + Yulee 2025 = 2 deals in 3 years. The question is whether to codify the playbook or stay opportunistic.
- **Southeast competitor void:** ~880 storefronts vacated 2024–2025 (Conn's / Badcock / American Freight) — unusual window of available real estate + customer base in core markets.
- **Current enterprise value anchor:** ~\$140–180M operating, roll-up path opens optionality at \$250M revenue without material category risk.

CONTINUITY & LEGACY

- **Family ownership preserved.** Any external engagement — advisory or otherwise — respects the sole-owner model. No equity ask, no dilution.
- **Justin's first full year delivered** record sales + profit. The succession bet is paying. This is acceleration, not substitution.
- **108-year operating heritage.** Any back-office or tech investment is scoped to preserve what's working — not replace it with something shinier.
- **Ashley corporate relationship** is a strategic asset. All three moves on the board are framed around making 1915 South a showcase licensee, not a standalone.

01 Southeast Roll-Up Platform

The FRG collapse cleared ~880 Southeast storefronts. A repeatable playbook — codified from Yulee and Fineman — lets 1915 South do 1–2 disciplined deals per year without stretching the operating team. **Expands the family's regional platform; preserves what's working.**

For Russell: compound capital in the category and geography the family already owns. Thorndike discipline, not financial engineering.

02 GMROI Execution Layer

Ashley corporate's Dec 2024 framework is the measurable accountability signal from Wanek. At 1915 South's scale, a **10% GMROI improvement frees \$2–4M of working capital** — every year. The execution layer on top of Zapsight's data is the unlock.

For Russell: same inventory, more return. Makes 1915 South the Ashley corporate showcase; Wanek-level visibility.

03 Sleep Vertical Launch

Tempur Sealy closed its acquisition of Mattress Firm in February 2025 and committed to reserve 25% of floor space for third-party brands. **Narrow window for preferred-supplier terms** — particularly for a disciplined regional partner. Format concept developed; unit economics modeled.

For Russell: new category, proven demand, launched into an unusually favorable negotiating window.

PHASE 1

Choose

1915 South leadership selects which of the three moves gets made first. All three are available; sequencing is the question. Full research loaded — no discovery cost.

PHASE 2

Align

Narrow scope around the chosen move. Objective measurements defined upfront. External support scoped tightly — advisory, not embedded. Ownership stays with

PHASE 3

Execute

Deliverable lands inside the existing leadership rhythm. Winners become operating reality; archived with learnings if not. No long-term commitment required upfront on
