Tips for Stretching Your Health Care Dollars

- **Take advantage of telemedicine.** Consult with a physician by phone or online to get treatment for minor concerns like a cold or rash. In most cases, telehealth costs less than an office visit and you don't need to leave your house to see a doctor.
- **Go generic.** If you are prescribed medication, ask your doctor if a generic version is available. By law, a generic drug is required to have the same active ingredients and efficacy as its brand name equivalent. But generic drugs are less expensive and have a lower copay.
- **Use the mail order service.** If you take a maintenance medication (a medication used long-term to manage a chronic condition, such as high blood pressure or depression), use the mail order service. You'll get up to a 90-day supply at a reduced cost as compared to a retail pharmacy.
- **FSA:** Enrolling in a TriNet-sponsored flexible spending account (FSA) can help your wallet stay full. During open enrollment, you can enroll in both a health care and dependent day care FSA that allows you to set aside pre-tax dollars from your paycheck to pay for eligible expenses. The FSA calculator in the benefits enrollment site can help you estimate your FSA expenses, so you get the maximum benefit and feel confident that you're contributing the right amount to your FSA.
